# **Description**

With increasing pressure on operator revenues, international traffic and roaming can be a significant source of revenue for operators - and a significant source of costs. It is therefore essential to approach these activities as businesses and to focus on driving as much revenue and margin as possible from the traffic. This 5-day training course teaches participants how to approach the management of international traffic & roaming as a business: by finding ways to improve revenues and reduce associated costs. The course includes discussions and analysis of the current market and of potential strategies and tactics available to increase profits.

#### **Learning Outcomes**

At the end of the course, participants will be able to:

- Approach international traffic management and roaming as business opportunities and negotiate more advantageous agreements
- Use a business case approach to improve revenues and reduce costs associated with international traffic management and roaming
- Apply international traffic analysis skills to help identify opportunities for increased profits
- Apply potential strategies and tactics to be used on a short and long term basis to increase profits
- Understanding potential strategies and tactics to be used on a short and long term basis to increase profits
